

G DATA Business solutions

14.3 Changelog

This document lists the changes that were introduced in version 14.3 of G DATA Business Solutions. To ensure relevance and readability, this document lists only major features and improvements.

This document applies to the following products: G DATA Antivirus Business, G DATA Client Security Business, G DATA Endpoint Protection Business, G DATA Managed Endpoint Security, G DATA Managed Endpoint Security Powered by Microsoft Azure.

Component	Feature	Scope
BEAST	BEAST is a graph-based NextGen technology developed by G DATA which reliably detects and stops defective processes and replaces the Behavior Blocker. BEAST identifies generic malicious behavior and can thus block even unknown malware. In the "learning mode", BEAST detections are not blocked for seven days, but merely added automatically to the white list. After this period, BEAST automatically switches to "Block and move to quarantine" mode and is then armed. G DATA recommends activating BEAST and leaving the two checkboxes preset here also activated.	MMS, Admin
Admin	End of support for Windows Vista and Windows 8.0. Both operating systems will no longer receive new security updates from G DATA, nor will they receive any non-security hotfixes	MMS, Client
Admin	Removed Silverlight Admin	MMS
Admin	Changed help system in G DATA Administrator to use online G DATA Help Center	MMS
Admin, Client	Added log user who triggered client uninstallation to serverlog	MMS
Admin	Fixed performance when moving clients in MES- Environment	MMS
Admin	Fixed filtering in Admin's network tree	MMS

macOS Client Support for MacOS 10.15 Catalina macOS Client Setup Corrected behavior that partially prevented the update and uninstallation of the Security Client Update Setup Fixed a problem that could prevent the installation of the device control drivers in some cases Update Setup Fixed a problem that in some cases prevented the Security Client from starting Update Email Protection Fixed behavior that Jira emails were detected as spam Client Device Control Fixed behavior that the Device Control did not show a message when the access to a device was blocked Client Exchange Fixed behavior that the Device Control did not show a message when the access to a device was blocked Client Exchange Fixed behavior that IMMS did not start because cached ScanJobReport file from Exchange plugin was too large Client Exchange Fixed behavior that MMS did not start because cached folders did not work Client Exchange Fixed behavior that email attachments in the journal mailbox were not scanned Client Exchange Fixed behavior that Emas could not be moved back from quarantine Client Fixed behavior that PatchManagement patches were not available on all devices/groups MMS Installationpackages	Component	Feature	Scope
and uninstallation of the Security Client Fixed a problem that could prevent the installation of the device control drivers in some cases Setup Fixed a problem that in some cases prevented the Security Client from starting Email Protection Fixed behavior that Jira emails were detected as spam Client Device Control Fixed behavior that the Device Control did not show a message when the access to a device was blocked Exchange Fixed behavior that internal and external emails were classified as spam Exchange Fixed behavior that MMS did not start because cached Scan JobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that the son-demand scan of public folders did not work Exchange Fixed behavior that times could not be moved back from quarantine Fixed behavior that ittems could not be moved back from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for bebian 10, CentOS, Red Hat Enterprise Linux Client Linux S, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	macOS Client	Support for MacOS 10.15 Catalina	macOS Client
the device control drivers in some cases Setup Fixed a problem that in some cases prevented the Security Client from starting Email Protection Fixed behavior that Jira emails were detected as spam Client Device Control Fixed behavior that the Device Control did not show a message when the access to a device was blocked Exchange Fixed behavior that internal and external emails were classified as spam Exchange Fixed behavior that MMS did not start because cached Scan JobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that the son-demand scan of public folders did not work Exchange Fixed behavior that tems could not be moved back from quarantine Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux R, Samba 4.10 Web Protection Extension Chromium Edge Web Protection Fixed: Fixefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Setup		Update
Security Client from starting	Setup	·	Update
Device Control Fixed behavior that the Device Control did not show a message when the access to a device was blocked Exchange Fixed behavior that internal and external emails were classified as spam Exchange Fixed behavior that MMS did not start because cached Scan JobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that email attachments in the journal mailbox were not scanned Exchange Fixed behavior that items could not be moved back from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux R, Samba 4.10 Web Protection Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Setup		Update
message when the access to a device was blocked Exchange Fixed behavior that internal and external emails were classified as spam Exchange Fixed behavior that MMS did not start because cached Scan JobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that email attachments in the journal mailbox were not scanned Exchange Fixed behavior that items could not be moved back from quarantine Fixed behavior that patchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for behan 10, CentOS, Red Hat Enterprise Linux Client Linux Client Support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client Fixed: Outlook Plugin gets disabled by Outlook due to Client	Email Protection	Fixed behavior that Jira emails were detected as spam	Client
Classified as spam Exchange Fixed behavior that MMS did not start because cached ScanJobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that the amail attachments in the journal mailbox were not scanned Exchange Fixed behavior that items could not be moved back from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux R, Samba 4.10 Web Protection Added support for the new Microsoft Browser Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Device Control		Client
ScanJobReport file from Exchange plugin was too large Exchange Fixed behavior that the on-demand scan of public folders did not work Exchange Fixed behavior that email attachments in the journal mailbox were not scanned Exchange Fixed behavior that items could not be moved back from quarantine Exchange Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Exchange		Client
folders did not work Exchange Fixed behavior that email attachments in the journal mailbox were not scanned Exchange Fixed behavior that items could not be moved back from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux Client Chromium Edge Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Exchange		Client
Exchange Fixed behavior that items could not be moved back from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. MacOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Exchange	·	Client
from quarantine Patch Management Fixed behavior that PatchManagement patches were not available on all devices/groups Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Exchange	·	Client
Installationpackages Added tool for using one installationpackage for different tenants Server Database Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Exchange		Client
different tenants Fixed behavior that MMS needed "dbcreator" server role even if database existed already Setup Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Patch Management	· · · · · · · · · · · · · · · · · · ·	MMS
role even if database existed already Fixed a problem that required reauthorization of the Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Installationpackages	· · · · · · · · · · · · · · · · · · ·	MMS
Security Client after updating via a created installation package. macOS/Linux Client Support for high dpi resolution monitor 4K macOS Client Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Server Database		MMS
Linux Client Support for Debian 10, CentOS, Red Hat Enterprise Linux Client Linux 8, Samba 4.10 Web Protection Extension Web Protection Extension Web Protection Extension Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Setup	Security Client after updating via a created installation	Update
Linux 8, Samba 4.10 Web Protection Added support for the new Microsoft Browser Client Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	macOS/Linux Client	Support for high dpi resolution monitor 4K	macOS Client
Extension Chromium Edge Web Protection Fixed: Firefox policies won't be loaded after the G DATA Client Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client	Linux Client	···	Linux Client
Extension Client is installed Web Protection Fixed: Webfilter is blocking another website when facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client			Client
facebook.com is on the blacklist Outlook Plugin Fixed: Outlook Plugin gets disabled by Outlook due to Client			Client
	Web Protection	——————————————————————————————————————	Client
	Outlook Plugin		Client

Outlook Plugin Fixed: Outlook freezes for a short time after clicking on meeting invitation Fixed: Outlook Plugin temp files aren't removed automatically in some cases Scan Server Fixed: GDScan.exe causes very high CPU usage Client KeyboardGuard Fixed: Keyboard is blocked in RDP session Client KeyboardGuard Fixed: Keyboard is not blocked Client KeyboardGuard Fixed: Keyboard is reported as changed after Windows update Portable The G DATA Portable Administrator can be started from any computer without further customization or special setup. Alauncher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server outher with the with new installation packages Subnet server Fixed behavior that subnet server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS disappeared after some time	Component	Feature	Scope
automatically in some cases Scan Server Fixed: GDScan.exe causes very high CPU usage Client KeyboardGuard Fixed: Keyboard is blocked in RDP session Client KeyboardGuard Fixed: Revoked keyboard is not blocked Client KeyboardGuard Fixed: Revoked keyboard is not blocked Client KeyboardGuard Fixed: Keyboard is reported as changed after Windows update Portable The G DATA Portable Administrator can be started from any computer without further customization or special setup. A launcher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages To ovoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	Outlook Plugin		Client
KeyboardGuard Fixed: Keyboard is blocked in RDP session Client KeyboardGuard Fixed: Revoked keyboard is not blocked Client KeyboardGuard Fixed: Keyboard is reported as changed after Windows update Client update Portable The G DATA Portable Administrator can be started from any computer without further customization or special setup.	Outlook Plugin	<u> </u>	Client
KeyboardGuard Fixed: Revoked keyboard is not blocked Client KeyboardGuard Fixed: Keyboard is reported as changed after Windows update Portable The G DATA Portable Administrator can be started from any computer without further customization or special setup. A launcher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD alsignment (AD root) MMS	Scan Server	Fixed: GDScan.exe causes very high CPU usage	Client
Fixed: Keyboard is reported as changed after Windows update Portable The G DATA Portable Administrator can be started from Administrator any computer without further customization or special setup. A launcher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	KeyboardGuard	Fixed: Keyboard is blocked in RDP session	Client
Update Portable The G DATA Portable Administrator can be started from any computer without further customization or special setup. A launcher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	KeyboardGuard	Fixed: Revoked keyboard is not blocked	Client
Administrator Launcher Alauncher loads the appropriate administrator version of the used G DATA Management Server in advance. Admin, Mobile Fixed validation of phone numbers which sometimes blocked adding of new contacts Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	KeyboardGuard		Client
Admin Changed WPF Admin so that it can be use as portable application Installationpackages Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	Administrator	any computer without further customization or special setup. A launcher loads the appropriate administrator version	MMS
application Fixed behavior that download of installation packages failed sporadically on Azure environment Installationpackages Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	Admin, Mobile		MMS
failed sporadically on Azure environment Fixed behavior that the Admin lost connection to the Management Server on inactivity in Azure environment Installationpackages Fixed behavior that downloading of installation packages on the slower connection was not possible Installationpackages To avoid "lost access key" on machines if their snapshots are being restored or reinstalled, it is suggested/required to update them with new installation packages Subnet server Fixed behavior that subnet server could not synchronize to the Main Management Server when the subnet server was installed remotely using IP address ActiveDirectory Fixed behavior that the Management Server used big amount of memory after the DC name was changed ActiveDirectory Fixed behavior that the AD allocation got lost when the DC was not available ActiveDirectory Fixed behavior that the AD assignment (AD root) MMS	Admin		MMS
